

COMPREHENSIVE 15-TASK DIGITAL AUDIT

AI-SEO & AEO AUDIT REPORT

JHB Curtain Cleaning | *jhbcurtaincleaning.co.za*

CRITICAL NAP DATA CORRUPTION IDENTIFIED — 47/100

Date: June 2026

Auditor: GLM-5.2 AI-SEO Strategist

Target: jhbcurtaincleaning.co.za

Tech Stack: Next.js 16 • TypeScript 5 • Tailwind CSS 4 • shadcn/ui

Audit Overview & Critical Findings

JHB Curtain Cleaning (jhbcurtaincleaning.co.za) has a solid technical foundation built on Next.js 16 with Static Site Generation (SSG), well-structured JSON-LD schema on the homepage and landing pages, and good core page speed metrics. The site's 18 landing pages — spanning services, sectors, and Johannesburg service areas — provide excellent topical authority potential and represent a thoughtful content architecture that few competitors in this niche can match.

However, the audit reveals a catastrophic NAP data corruption issue that undermines virtually every SEO and local visibility signal. The entire codebase has reverted to the old brand identity: "On The Spot Curtain Cleaning Specialists" with the old domain (curtaincleaning.org), old address (Martha North Rd, Randburg), wrong founder (Kathy Dunlop), and wrong contact details. This data appears in over 70 instances across site-data.ts, layout.tsx, JSON-LD schemas, meta tags, FAQ content, and component files. Google's Knowledge Graph may be creating duplicate or conflicting entities as a result, effectively destroying local ranking authority.

Beyond the NAP crisis, the site is missing critical SEO infrastructure: no XML sitemap, no canonical tags, no blog/content hub for AEO optimization, no Organization schema, and no hreflang or locale targeting. Image assets are nearly non-existent (only 2 logo PNGs on the entire site), and there are no before/after photos — the single most important trust signal for a cleaning service. Internal linking between the 18 landing pages is absent in body content, preventing link equity flow and semantic context from connecting related services, sectors, and areas.

The 18 landing pages provide a strong topical cluster foundation, but they need AEO optimization (direct-answer formatting, conversational keyword targeting, pricing transparency) and cross-linking to realize their potential. With immediate NAP correction and the implementation roadmap outlined in this report, the site can realistically achieve a score of 75+ within 60 days.

47

OVERALL SCORE — OUT OF 100

AI Search Engine Optimization Strategy

CRITICAL Entity Identity Crisis

The JSON-LD schema in layout.tsx still references "On The Spot Curtain Cleaning Specialists" with URL "curtaincleaning.org" and address "Martha North Road, Randburg." AI systems cannot confidently match this business to real-world entities. The @id field still points to curtaincleaning.org. Google's Knowledge Graph may create duplicate or conflicting entities.

CRITICAL No Organization Schema

The site lacks a top-level Organization schema. AI crawlers use this to understand corporate entity, founding, and authority. Without it, the business has no verified organizational identity in knowledge graphs.

HIGH No BreadcrumbList Schema

The 18 landing pages have no breadcrumb markup. AI systems use breadcrumbs to understand page hierarchy and topical relationships.

HIGH Insufficient Direct Answers

FAQ content is buried inside accordion components. While text is crawlable, AI Overviews prefer content that answers questions in the first 1-2 sentences before expanding. Current FAQ answers are long-form paragraphs.

MEDIUM No Speakable Specification

No speakable schema markup exists, which tells voice assistants and AI which content is suitable for audio playback.

Implementation Plan

- 1 **Fix NAP data across ALL files** immediately. JSON-LD @id, name, url, telephone, email, and address must match canonical NAP format exactly.
- 2 **Add Organization schema** to layout.tsx alongside the existing LocalBusiness with @id, name, url, logo, sameAs, founder (Stephen Dunlop), and foundingDate (2009).
- 3 **Add BreadcrumbList schema** to every landing page with Home / Services (or Sectors/Areas) / Page Name hierarchy.

4 **Restructure FAQ answers** to lead with a direct 1-2 sentence answer, then expand. Example: "Can you clean curtains without taking them down? Yes. We clean curtains exactly where they hang using on-site dry-cleaning equipment."

5 **Add speakable schema** to FAQ items for voice search optimization.

```

}
```

TASK 2 / SEO - PAGE

On-Page SEO Analysis

GOOD H1 Tag

Homepage has a single, keyword-rich H1: "Professional Curtain Cleaning Johannesburg" — this is strong.

HIGH H2 Hierarchy Needs Fix

"About On The Spot" should be "About JHB Curtain Cleaning"; "How It Works" should be "How On-Site Curtain Cleaning Works"; "FAQ" should be "Curtain Cleaning FAQ — Johannesburg".

CRITICAL Meta Title Wrong Brand

Layout.tsx shows "Professional Curtain Cleaning Johannesburg | On The Spot — Free Assessment" — the old brand name persists. Should be "Professional Curtain Cleaning Johannesburg | JHB Curtain Cleaning — Free Assessment".

HIGH**Meta Description Missing Location**

Current description mentions "Sandton, Randburg, Fourways" but not "Florida, Roodepoort" where the business is actually located. Should include primary service area AND actual location.

GOOD**URL Structure**

Clean slug-based URLs: /services/curtain-blind-cleaning, /sectors/hospitality, /areas/jhb-north — these are SEO-friendly.

HIGH**Keyword Density Imbalance**

"On The Spot" (old brand) appears 30+ times, diluting the actual brand keyword. "Curtain cleaning Johannesburg" and "on-site curtain cleaning" — the highest-value local+service combos — are underrepresented.

CRITICAL**All 18 Landing Page Meta Titles Wrong**

All 18 landing pages still use "On The Spot" in their meta titles instead of "JHB Curtain Cleaning".

Implementation Plan

- 1 **Replace ALL "On The Spot"** brand references with "JHB Curtain Cleaning" across meta titles, H2s, body copy.
- 2 **Homepage meta title:** "Curtain Cleaning Johannesburg | On-Site | No Removal | JHB Curtain Cleaning"
- 3 **Homepage meta description:** "Professional on-site curtain cleaning in Johannesburg. No removal, no shrinkage guarantee. Free assessment. Based in Florida, Roodepoort — serving Sandton, Randburg, Fourways, Pretoria & all JHB suburbs. +27 75 011 9200"
- 4 **Update H2 hierarchy** on homepage with keyword-rich headings.
- 5 **Add "curtain cleaning Johannesburg"** and "on-site curtain cleaning" as primary keyword targets in the first 100 words of every landing page hero paragraph.

TASK 3 / SEO-AUDIT

Technical SEO & Site Health

CRITICAL**No XML Sitemap**

There is no sitemap.xml or app/sitemap.ts file. Search engines have no structured map of the 19 pages. This directly impacts crawl efficiency and indexation speed.

CRITICAL No Canonical Tags

No canonical URL tags exist on any page. Without canonicals, search engines may treat `www/non-www`, `http/https`, and trailing-slash variants as duplicate content.

MEDIUM `next.config.ts` Issues

`typescript: { ignoreBuildErrors: true }` masks type errors. `reactStrictMode: false` disables React strict mode. No image optimization configuration (formats, sizes).

MEDIUM No Custom 404 or Error Boundary

No custom `not-found.tsx` exists. No `error.tsx` at the app level. Runtime errors show a blank page.

GOOD Font Loading & Mobile Responsiveness

Inter and Playfair Display use `display: 'swap'` — eliminates FOIT. Tailwind responsive prefixes used throughout. All grids collapse to single column on mobile.

MEDIUM Lang Attribute Wrong

`<html lang="en">` should be `<html lang="en-ZA">` for South African English locale targeting.

HIGH Page Speed Concerns

The 844-line `contact-section.tsx` and 605-line `header.tsx` are large client components. Framer Motion adds ~45KB to the bundle. No code splitting optimization visible.

Implementation Plan

- 1 **Create `src/app/sitemap.ts`** with all static pages, service pages, sector pages, and area pages. Include `lastModified`, `changeFrequency`, and `priority` values.
- 2 **Add canonical URLs** to `layout.tsx` metadata: `metadataBase`, `alternates: { canonical: '/' }`. And to each landing page `generateMetadata`.
- 3 **Fix `html lang`** attribute from `"en"` to `"en-ZA"`.
- 4 **Create custom `not-found.tsx`** and `error.tsx` pages.
- 5 **Update `next.config.ts`** — remove `ignoreBuildErrors`, enable `reactStrictMode`, add image config with formats: `['image/avif', 'image/webp']`.

```
import { MetadataRoute } from 'next'

const BASE_URL = 'https://www.jhbcurtaincleaning.co.za'

export default function sitemap(): MetadataRoute.Sitemap {
  const staticPages = [
    { url: BASE_URL, lastModified: new Date(),
      changeFrequency: 'weekly', priority: 1.0 }
  ]
  // ...service, sector, and area pages
  return [...staticPages, ...servicePages, ...sectorPages, ...areaPages]
}
```

TASK 4 / SEO-IMAGES

Visual Asset Optimization

CRITICAL Only 2 Images on Entire Site

The only images are the logo (bronze-seal.png and logo.png) in the header. The hero section uses CSS gradients and SVG shapes — no real photographs. The about section uses initials "KD" — no photo of Stephen Dunlop. Landing pages have zero images.

HIGH No Alt Text Strategy

The two existing images have alt text "On The Spot bronze seal logo" and "On The Spot logo" — using the OLD brand name and not descriptive enough for image search.

MEDIUM No WebP/AVIF Optimization

Logo files are PNG format. Next.js Image component can auto-serve WebP/AVIF, but it's not configured in next.config.ts.

HIGH No Before/After Gallery

For a cleaning service, before/after photos are the #1 trust signal and a major image search opportunity. None exist.

LOW Decorative SVGs Missing Titles

The hero SVG curtain drapes have no <title> element for accessibility.

Implementation Plan

- 1 **Configure Next.js image optimization** in next.config.ts with formats: ['image/avif', 'image/webp'].

- 2 **Update alt text** on existing images to include brand name and descriptive keywords.
- 3 **Add before/after gallery** section to homepage with 6-8 high-quality images with descriptive alt text.
- 4 **Add real photograph** of Stephen Dunlop to the About section, replacing "SD" initials circle.
- 5 **Add service-specific images** to each of the 6 landing pages (at least 2-3 per page).
- 6 **Add <title> elements** to decorative SVGs for accessibility compliance.

TASK 5 / SEO-FUNDAMENTALS

Foundational SEO Alignment

MEDIUM robots.txt Needs Update

Current robots.txt is minimal — no Sitemap reference, no crawl-delay, no disallow rules for API routes or private paths.

CRITICAL No XML Sitemap & No Canonical Tags

As detailed in Task 3 — no sitemap exists and no canonical URLs are set. These are foundational SEO requirements.

CRITICAL Open Graph URL Points to Wrong Domain

layout.tsx openGraph.url is set to "https://curtaincleaning.org" instead of "https://www.jhbcurtaincleaning.co.za".

LOW No hreflang Tags

Not critical for a single-language South African site, but best practice for en-ZA locale targeting.

Implementation Plan

- 1 **Update robots.txt** with Sitemap reference, disallow /api/, and proper Allow rules.
- 2 **Create sitemap.ts** as described in Task 3.
- 3 **Add canonical tags** as described in Task 3.
- 4 **Fix all URL references** from curtaincleaning.org to www.jhbcurtaincleaning.co.za.
- 5 **Add metadataBase** to layout.tsx: new URL('https://www.jhbcurtaincleaning.co.za').

User-agent: *
Allow: /
Disallow: /api/

Sitemap: https://www.jhbcurtaincleaning.co.za/sitemap.xml

TASK 6 / SEO-AEO-BLOG-WRITER

Answer Engine Blog Architecture

CRITICAL No Blog Exists

The site has zero blog content. There is no /blog route, no article pages, no content marketing infrastructure. This is the single biggest gap for AEO — AI systems prioritize sites with deep, authoritative content libraries.

HIGH No Content Hub

Without a blog, the site cannot rank for informational queries like "how to clean curtains without removing them" or "can curtains shrink in the wash" — these are high-volume queries that feed AI Overviews.

HIGH No Author Schema

Without blog posts, there are no Article schemas with author attribution — a key E-E-A-T signal.

6 Initial AEO-Optimized Blog Posts

#	Post Title	Target Query
1	How to Clean Curtains Without Taking Them Down — Complete Guide	"how to clean curtains without removing"
2	Can Curtains Shrink When Washed? The Science Explained	"do curtains shrink"
3	On-Site vs Off-Site Curtain Cleaning: What Johannesburg Residents Need to Know	"curtain cleaning Johannesburg"
4	How Often Should You Clean Your Curtains? A Room-by-Room Guide	"how often clean curtains"
5	Fire Proofing Curtains for South African Hotels: SANS Compliance Guide	"fire proofing curtains South Africa"
6	Dust Mites in Curtains: Health Risks and Professional Removal	"dust mites curtains"

AEO Blog Post Structure

- 1 H1 with exact question as title
- 2 First paragraph: Direct answer in 1-2 sentences (the "extractable answer")
- 3 Subheadings as questions (H2, H3)
- 4 FAQ section at the bottom
- 5 Article schema with author (Stephen Dunlop), publisher, datePublished, dateModified
- 6 FAQPage schema for the FAQ section

TASK 7 /SEO-CONTENT-AUDITOR

Semantic Content Audit

MEDIUM Keyword Cannibalization Risk

The homepage and /services/curtain-blind-cleaning both target "curtain cleaning Johannesburg" as a primary keyword. They compete for the same search intent rather than differentiating (homepage = brand/navigational, landing page = transactional).

HIGH Content Depth Imbalance

The 18 landing pages have substantial content (800-1200 words each), but the homepage sections are thin — the Services section has only card titles and 1-line descriptions.

CRITICAL Old Brand Name Contamination

"On The Spot" appears 30+ times in site-data.ts, "Kathy Dunlop" appears in FAQ answers and hero paragraphs, and "curtaincleaning.org" appears in email references. This creates semantic confusion for search engines and AI systems.

HIGH No Semantic Variation

Content heavily uses "curtain cleaning" but lacks semantic variants: "drapery cleaning," "curtain sanitisation," "window treatment cleaning," "drape cleaning service." These LSI keywords help search engines understand topical breadth.

MEDIUM Duplicate FAQ Content

The FAQ section on the homepage and the concerns section on the curtain-blind-cleaning landing page both answer "Will my curtains shrink?" with similar content.

Implementation Plan

- 1 **Differentiate homepage vs landing page targeting:** Homepage = brand/navigational; Service pages = transactional; Sector pages = industry-specific; Area pages = hyperlocal.
- 2 **Expand homepage service cards** from 1-line descriptions to 2-3 sentences with LSI keywords.
- 3 **Replace ALL old brand references** across all content files.
- 4 **Add semantic keyword variations** naturally: "drapery cleaning," "window treatment cleaning," "curtain sanitisation," "fabric cleaning service."
- 5 **De-duplicate FAQ content** — homepage FAQ for general questions, landing page concerns for service-specific questions.

TASK 8 / LOCAL-LEGAL-SEO-AUDIT

Local Visibility & Industry Compliance

CRITICAL — 10/10 NAP Consistency FAILURE

This is the most severe issue on the entire site. The NAP data is catastrophically inconsistent. The business may appear as TWO different entities in Google's Knowledge Graph, destroying local ranking authority.

CURRENT (WRONG)

Name: On The Spot Curtain Cleaning Specialists
Address: Martha North Rd, Randburg, Johannesburg 2194
Phone: 075 011 9200 (no country code)
Email: info@curtaincleaning.org
URL: curtaincleaning.org
Founder: Kathy Dunlop
Geo: -26.0991, 27.9962

CORRECT (PER TECH DOC V1.0)

Name: JHB CURTAIN CLEANING
Address: 10 2nd Ave, Florida, Roodepoort, 1710, South Africa
Phone: +27 75 011 9200
Email: info@jhbcurtaincleaning.co.za
URL: https://www.jhbcurtaincleaning.co.za
Founder: Stephen Dunlop
Geo: -26.1752726, 27.9233293

CRITICAL Google Business Profile Mismatch

If the GBP is updated to the new NAP but the website still shows old data, Google will detect the inconsistency and may suppress local pack rankings.

CRITICAL JSON-LD Schema Mismatch

The LocalBusiness schema in layout.tsx has the old name, old URL, old address, old phone, old email, and wrong geo coordinates. This is the #1 signal Google uses for local entity resolution — and it's wrong.

MEDIUM No GBP Link & POPIA Text Wrong

The site doesn't link to its Google Business Profile. The POPIA checkbox text says "On The Spot Curtain Cleaning Specialists" — wrong legal entity name.

Files Requiring NAP Update

File	Changes Needed
src/lib/site-data.ts	name, shortName, domain, phone, email, address, whatsapp, social URLs
src/lib/data.ts	FAQ answers referencing Kathy, old phone, old email, "On The Spot"
src/app/layout.tsx	Metadata title, description, authors, OG tags, Twitter tags, JSON-LD schema
src/app/api/chat/route.ts	System prompt: business name, address, phone, email, website
src/components/header.tsx	Brand text, alt text
src/components/footer.tsx	Brand text
src/components/about-section.tsx	"About On The Spot" heading, initials KD to SD
src/components/contact-section.tsx	POPIA consent text
src/components/ai-chatbot.tsx	Phone in error message
src/app/services/[slug]/service-landing-client.tsx	JSON-LD address

TASK 9 / SEO-AEO-CONTENT-CLUSTER

Topical Authority Architecture

GOOD Solid Cluster Foundation

The 18 landing pages create a natural pillar-cluster structure: 6 Service clusters, 6 Sector clusters, 6 Area clusters. This is a strong foundation that few competitors in this niche can match.

HIGH Missing Pillar Pages

No dedicated pillar/hub pages tie the clusters together. A user searching "curtain cleaning Johannesburg" should land on a comprehensive pillar page that links to all related services, sectors, and areas.

HIGH No Cross-Linking Between Clusters

Service pages don't link to related sector pages. Area pages don't link to services available in that area. This prevents link equity and semantic context from flowing between related content.

CRITICAL No Blog Content Hub

As noted in Task 6, no blog exists to provide informational depth that supports the transactional landing pages.

Content Cluster Map

Primary Pillar: "Curtain Cleaning Johannesburg" (homepage)

+-- Service Cluster

- | +-- /services/curtain-blind-cleaning (primary service)
- | +-- /services/mattress-sanitisation
- | +-- /services/upholstery-cleaning
- | +-- /services/master-guarding
- | +-- /services/fire-proofing
- | +-- /services/rug-care

+-- Sector Cluster

- | +-- /sectors/hospitality
- | +-- /sectors/corporate
- | +-- /sectors/healthcare
- | +-- /sectors/education
- | +-- /sectors/venues
- | +-- /sectors/residential

+-- Area Cluster

- | +-- /areas/jhb-north
- | +-- /areas/jhb-east
- | +-- /areas/jhb-south
- | +-- /areas/jhb-west
- | +-- /areas/jhb-central
- | +-- /areas/pretoria-midrand

+-- Blog Cluster (TO CREATE)

- +-- /blog/how-to-clean-curtains-without-removing
- +-- /blog/do-curtains-shrink-when-washed
- +-- /blog/how-often-clean-curtains
- +-- /blog/dust-mites-in-curtains-health-risks
- +-- /blog/fire-proofing-curtains-sans-compliance
- +-- /blog/onsite-vs-offsite-curtain-cleaning

Intent & Conversational Keywords

HIGH Missing Conversational Keywords

The site doesn't target question-format queries that AI systems prefer: "Who cleans curtains without taking them down near me?", "How much does curtain cleaning cost in Johannesburg?", "Can you dry clean curtains on-site?"

MEDIUM Missing Long-Tail Variations

High-intent long-tail keywords are not targeted: "curtain dry cleaning Sandton price", "hotel curtain cleaning service Johannesburg", "fire retardant curtain treatment South Africa".

MEDIUM No Keyword Mapping Document

There's no explicit mapping of which keyword targets which page.

Primary Keyword Targets by Page Type

Page Type	Primary Keyword	Conversational Query
Homepage	curtain cleaning Johannesburg	"Who does curtain cleaning in Johannesburg?"
/services/curtain-blind-cleaning	curtain blind cleaning Johannesburg	"Can you clean curtains without taking them down?"
/services/mattress-sanitisation	mattress cleaning Johannesburg	"How do I get rid of dust mites in my mattress?"
/services/upholstery-cleaning	upholstery cleaning Johannesburg	"Who cleans sofas and upholstery in Johannesburg?"
/services/master-guarding	fabric protection Johannesburg	"How do I protect my curtains from stains?"
/services/fire-proofing	fire proofing curtains Johannesburg	"Do hotel curtains need fire proofing in South Africa?"
/services/rug-care	rug cleaning Johannesburg	"Who cleans Persian rugs in Johannesburg?"
/sectors/hospitality	hotel curtain cleaning Johannesburg	"How do hotels clean curtains without disturbing guests?"
/sectors/corporate	office curtain cleaning Johannesburg	"What curtain cleaning service works after hours?"
/sectors/healthcare	hospital curtain cleaning Johannesburg	"How are hospital curtains cleaned for infection control?"
/areas/jhb-north	curtain cleaning Sandton	"Where can I get curtains cleaned in Sandton?"
/areas/jhb-west	curtain cleaning Roodepoort	"Curtain cleaning service in Roodepoort?"
/areas/pretoria-midrand	curtain cleaning Pretoria	"Curtain cleaning in Pretoria?"

TASK 11 / SEO - AEO - SCHEMA - GENERATOR

Advanced Structured Data

CRITICAL LocalBusiness Schema Wrong

Present in layout.tsx but has old name, old URL, old address, old phone, old email, wrong geo coordinates. This is the #1 signal for local entity resolution.

GOOD**Service & FAQPage Schema Exist**

Service schema present on service landing pages. FAQPage schema present on landing pages with concerns — good structure.

CRITICAL**Missing Multiple Schema Types**

No Organization, BreadcrumbList, Article, Review/AggregateRating (individual pages), ImageObject, HowTo, or PriceSpecification schemas exist.

Schema Implementation Plan

- 1 **Organization schema** — add to layout.tsx with @id, name, url, logo, sameAs, founder (Stephen Dunlop), foundingDate, foundingLocation, contactPoint.
- 2 **HowTo schema** for the 4-step process on homepage: Free Assessment, Pre-Treatment, Deep Clean, Protect & Finish.
- 3 **BreadcrumbList schema** on every landing page with Home / Category / Page hierarchy.
- 4 **Review schema** with individual reviews on homepage.
- 5 **Fix LocalBusiness schema** with correct NAP data per Technical Document v1.0.

TASK 12 / SEO-AEO-INTERNAL-LINKING

Contextual Link Graph

GOOD**Navigation Links**

Header dropdown menus link to all 18 landing pages. Footer has sectors and services columns with links. This provides basic discoverability.

CRITICAL**No In-Content Links**

Landing page body content has ZERO internal links. The 800+ word paragraphs on each page contain no contextual links to related pages. This is a major missed opportunity for both link equity flow and semantic context.

HIGH**No "Related Services" Section**

Landing pages don't have a "Related Services" or "You May Also Need" section that cross-links between services (e.g., curtain cleaning to Master Guarding protection).

HIGH No Area-Service Intersection Links

Area pages don't link to specific services available in that area. Service pages don't mention which areas they serve with links.

Implementation Plan

- 1 **Add "Related Services" link block** to every landing page sidebar (below the existing guarantees card).
- 2 **Add "Areas We Serve" link block** to service and sector landing pages.
- 3 **Add inline contextual links** within body paragraphs: "curtain cleaning" to /services/curtain-blind-cleaning, "fire compliance" to /services/fire-proofing, etc.
- 4 **Make homepage service cards clickable** (link to landing pages).
- 5 **Add "Sectors We Serve" section** at the bottom of each service landing page with icon links.

TASK 13 /SEO-AEO-LANDING-PAGE-WRITER

High-Conversion AEO Landing Pages

GOOD Landing Page Structure

Pages follow a solid template: Hero, Guarantee Strip, Two-Column Content + Sidebar, Newsletter, CTA. This is a well-structured conversion funnel.

HIGH Direct Answer Placement

Hero paragraph is narrative-style ("For over 15 years, Kathy Dunlop and the team...") instead of leading with a direct answer to the user's search query. AI Overviews extract the first 1-2 sentences.

HIGH Missing "What You'll Pay" Section

No pricing information on landing pages. AI Overviews frequently extract pricing data. A "Typical Pricing" section with ranges would be both a conversion tool and an AEO extractable answer.

HIGH Missing Social Proof Module

No customer testimonials, Google review excerpts, or trust badges beyond the guarantee strip. E-E-A-T requires evidence of real customer experiences.

Hero Paragraph Restructure Example

BEFORE: "For over 15 years, Kathy Dunlop and the team at On The Spot Curtain Cleaning Specialists have been transforming tired, dusty curtains..."

AFTER: "JHB Curtain Cleaning provides professional on-site curtain and blind cleaning in Johannesburg – without removing your curtains. Our dry-cleaning process eliminates dust, allergens, and stains with zero shrinkage risk, and your curtains are clean and dry before we leave."

Pricing Guide Card (Add to Sidebar)

Scope	Price Range
Small (1-2 rooms)	R800 – R1,500
Medium (3-4 rooms)	R1,500 – R3,000
Large (5+ rooms)	R3,000 – R5,500
Commercial	Custom quote

TASK 14 / SEO-AEO-CONTENT-QUALITY-AUDITOR

E-E-A-T & Value Assessment

HIGH

Experience — Weak

The site claims "15+ years experience" and "5,000+ clients served" but provides no evidence. No case studies, no before/after photos, no specific project examples. Google's Quality Raters look for demonstrated experience, not just claims.

MEDIUM

Expertise — Moderate

The founder bio mentions "interior decorator" and "fabric expert" credentials, but no certifications, training, or professional affiliations are listed. No visible credential verification.

HIGH

Authoritativeness — Weak

No external authority signals: no press mentions, no industry association memberships, no guest articles, no partnerships. Low domain authority (new domain). No backlink strategy exists.

MEDIUM

Trustworthiness — Moderate

Physical address exists (but shows old address), phone number exists. Google rating (4.9) is claimed but not verified with a link to actual reviews. No SSL certificate information displayed.

MEDIUM

YMYL Concern — Fire Proofing

The fire proofing service falls under "Your Money or Your Life" — it involves safety compliance. This page needs the strongest E-E-A-T signals: SANS certification numbers, compliance documentation, and professional credentials.

Implementation Plan

- 1 **Add "Verified Credentials" section** to About page with certifications, Master Guarding details, SANS compliance reference, professional associations.
- 2 **Add "Case Studies" section** with 3-4 specific project examples with before/after photos and client permission.
- 3 **Link to actual Google Business Profile** reviews page so users can verify the 4.9 rating claim.
- 4 **On fire proofing landing page**, add SANS standard reference numbers, certificate example image, compliance documentation, professional accreditation logos.
- 5 **Create author bio box** for Stephen Dunlop that appears on blog content with credentials, photo, and links.

TASK 15 / SEO-AEO-META-DESCRIPTION-GENERATOR

CTR & Snippet Optimization

CRITICAL

Homepage Meta Title Wrong

"Professional Curtain Cleaning Johannesburg | On The Spot — Free Assessment" — old brand name persists.

HIGH

Homepage Meta Description Incomplete

Missing actual location (Florida, Roodepoort), missing phone number, missing brand name.

CRITICAL

All 18 Landing Page Meta Titles Wrong

All use "On The Spot" instead of "JHB Curtain Cleaning".

generateMetadata functions only set title and description from data, but the descriptions are optimized for on-page content, not for search snippet CTR. They're too long and lack a CTA.

Recommended Meta Tags

Page	Title	Description
Homepage	Curtain Cleaning Johannesburg On-Site No Removal JHB Curtain Cleaning	Professional on-site curtain cleaning in Johannesburg. No removal, no shrinkage guarantee. Free assessment. Florida, Roodepoort — serving Sandton, Randburg, Fourways, Pretoria. Call +27 75 011 9200.

SUMMARY

Severity Summary & Issue Count

Severity	Count	Key Issues
CRITICAL	5	NAP data corruption, no XML sitemap, no blog, no Organization schema, no canonical tags
HIGH	7	No images/gallery, no cross-linking, wrong meta titles, no pricing, weak E-E-A-T, no internal links, missing direct answers
MEDIUM	6	Thin homepage content, keyword cannibalization, no 404 page, no semantic keywords, no error boundary, lang attribute wrong
LOW	3	SVG accessibility, no hreflang, no GBP link

ROADMAP

Priority Implementation Roadmap

1

IMMEDIATE — This Week

Critical fixes that block all other progress

- 1. Fix ALL NAP data across all files (10+ files, 70+ instances)
- 2. Create XML sitemap (src/app/sitemap.ts)
- 3. Add canonical tags to all pages
- 4. Fix all meta titles and descriptions (homepage + 18 landing pages)
- 5. Update JSON-LD schema with correct NAP data

2

Week 2

Structural SEO improvements

- 1. Add Organization schema to layout.tsx
- 2. Add BreadcrumbList schema to all landing pages
- 3. Add HowTo schema to homepage
